Scott Holgate, Operations Manager / Jackson Rancheria / 916.786.8178

The Jackson Rancheria public safety building is the first Native American facility in California to achieve LEED Silver certification and the first LEED certified building in Amador County. The two-story facility houses the council fire and police department, administrative office spaces and information technology department for the Jackson Rancheria Casino and Hotel. The building is a mission critical facility with a 600kva back-up generator with a 1000 gallon propane tank, which will allow uninterrupted service 24 hours a day, seven days a week in the event of an emergency.

Interface designed the interior lighting which both highlights and protects displays of Miwuk Indian artifacts throughout the building.

Seventy-six percent of the building has natural daylighting, which reduces energy usage and need for additional lighting.

The Jackson Rancheria Public Safety Building is the first Native American Building to achieve LEED Silver Certification in California.
