Richard Durr, Project Manager / Fred Meyer / 503.797.3561

Interface has provided services since 1976 for HVAC, plumbing, lighting and power distribution design, research and development, energy-management and alarms and emergency power generator system design for this major shopping center chain. Departments for which we have performed systems design include grocery, refrigeration, various retail departments, tenant areas, computer applications and energy management systems.

Interface contributed mechanical, electrical, plumbing and lighting design specifications for Fred Meyer's latest retail store in Portland at Interstate Avenue. Built on the same site as the previous store, site restrictions required it to be designed to a newer, larger two-story prototype. The new building measures 155,000 square feet.

Interface Engineering has contributed design services for over 35 Fred Meyer stores.
