Hoping to create a peaceful place for patients and visitors, Mercy Medical Center recently renovated their South Building for the addition of the Catherine McCauley Chapel. Using existing hospital space, the Medical Center also built an exterior garden and a reflection pool.

Interface supported this effort by designing mechanical and electrical systems—HVAC, power distribution, low voltage, and security—that connected the existing building to the new area. The addition also includes a retail shop, storage room, a spiritual care area, and offices.

Interface also provided lighting design for the chapel, reflection pool and landscape areas.
