Engineering Consultancy

### Completion

End of 2010

### Building Size

26,000 m<sup>2</sup> total

### Project Cost

\$40 million USD

### Contact

Yasser Yacoub, Project  
Manager / Ewan Architects  
and Engineering  
Consultancy / Abu Dhabi,  
UAE

Renderings: Design International

Interface recently began design work on a luxury hotel for Mövenpick Hotels and Resorts in the United Arab Emirates. The project will also have two levels of below-ground parking provided for residents and guests.

For the design development of this project, Interface worked in conjunction with a reputable engineering firm headquartered in the UAE. Interface coordinated with our design partner and the architect for the selection of MEP equipment, space allocation and planning, and utility requirements and routing inside the building. Interface design criteria are focused to provide our clients with reliable and efficacious engineered systems which expend minimal energy and yield maximum benefit.

The resort will include 160 modern rooms and ambassador suites, 70 stand-alone chalets, three restaurants and bars, a business center, an spa and health club, a performing arts theatre and retail spaces.
