Preserving and honoring history, serving the present and accommodating the future—this was the hope the City of Roseville had for its new Civic Center in the heart of town. The design team set about to make that happen by using distinct architectural forms and historically significant building materials. Now, not only does the center provide a central location for all permit processing and bill paying for this community of 92,000 residents, it also serves as a gathering place for locals and visitors.

Interface designed the mechanical, electrical and lighting systems for this building, which acted as the catalyst for the revitalization of the central city urban core.

The expansion of the Roseville Civic Center included an addition and the remodel of the existing space.
