Architect

Yost Grube Hall Architecture

Completion

September 2002

Building Size

30,000 m²

Project Cost

\$95 million

Contact

Joachim Grube,
Principal / Yost Grube Hall
Architecture / 503.221.0150

Interface provided mechanical, electrical, plumbing, telecommunications, security, fire protection and lighting design documents. The site features a nine-story, 30,000 m² office building that includes a cafeteria, auditorium, executive boardroom, central plant building, data center and human resource building. Interface designed a centralized utility plant for the compound with paralleled diesel-fired back-up power generators, boilers fueled by natural gas or oil and a potable water treatment and storage system. As a secure compound, security systems with centralized monitoring were necessary. Interface also developed a master plan for relocation of the site, including a program to include 100 units of new housing and renovations for 200 existing units.

In addition to MEP, interface also wrote commissioning specifications for the site and detailed operating and maintenance instructions.

The project was designed to meet the most stringent requirements of both the UBC and SNIP (Eastern European and Russian) codes.
